Summary

Software Developer and Music Composer with over 8 years in software engineering, game development, testing, and IT. Currently building features for POS systems at Swiftpos using C# and Angular, with a strong foundation in Python, Unity, JavaScript, SQL, automation, testing, scripting, and database work. Skilled in developing automated tests using Ansible, NUnit, Moq, pytest, and Playwright, and proficient in identifying and resolving critical bugs to ensure quality. Passionate about creating practical features, reliable workflows, music for interactive experiences, and robust systems. Open to opportunities in Software Development, Game Development, Testing, and Music Composition.

Technical Skills

- **Programming:** C#, Python, Java, YAML, Node.js, JavaScript, C++, PHP, VB.NET
- **Game Development:** Unity, Blender, Zenject, VR Development
- **Web Development:** HTML, CSS, Angular
- **Testing and Automation:** Ansible, NUnit, Jest, Moq, Playwright, pytest, Ruff, GitHub Actions, Manual and Automated Testing, Test Specification Creation
- **Databases:** MySQL, PostgreSQL, SQL, AWS DynamoDB, Oracle
- **Tools:** AWS Lambda, AWS Cognito, Git, GitHub Actions, SVN, Jira, Ollama
- **Music Composition:** Game BGM, SFX Design, Character Voice Design

Professional Experience

Software Developer

Swiftpos - Australia (Remote) | January 2025 – Present

- Develop features and practical solutions for Swiftpos POS systems that support business sales and operations.
- Build and improve product functionality using C# and Angular, delivering reliable updates and system enhancements.
- Review code and guide teammates through feature implementation to maintain quality and consistency.
- Support continuous improvement across POS development, automation, and technical operations.

Freelance Game Tester

Game Tester | Lionbridge Games Studios | January 2024 – Present

- Performed on-demand, manual testing of single-player and multiplayer games across various genres, providing valuable feedback on gameplay and usability.
- Documented detailed bug reports to improve player experience and ensure high-quality standards.
- Adhered to strict confidentiality and NDA agreements, maintaining discretion regarding project specifics and game content.
- Received consistently high ratings from project teams for professionalism, attention to detail, and quality contributions.

Unity Software Engineer

Floramis - Singapore (Remote) | September 2022 – December 2024

- Developed and tested interactive features for a mobile game, focusing on plant and pet care mechanics.
- Contributed to feature design, technical documentation, and diagrams for application workflow, dataflow, and database design.
- Conducted code reviews and provided mentorship to junior developers.
- Composed and integrated original background music, sound effects, and visual effects tailored to gameplay.

Application Development Analyst

Accenture - Cebu City | May 2020 – January 2021

- Provided critical support for business systems, resolving technical issues efficiently.
- Acted as a bridge between teams by translating communications from Nihongo to English.
- Implemented dynamic services to optimize system operations and reduce downtime.

Research and Development Engineer

Advanced World Solutions - Cebu City | July 2016 – May 2020

- Developed and tested multiple software projects, ranging from medical document analysis to environment automation.
- Conducted research and documented findings to improve project outcomes.
- Participated in client communications in Nihongo, providing weekly updates and reports.

Key Projects

Smart Job Scraper

- **Role:** Developer
- **Description:** Built a Python automation tool and local dashboard for organizing job opportunities, reviewing matches, and turning a noisy search process into a focused workflow. Includes AI-assisted review with local Ollama models, configurable filtering, review notes, and spreadsheet-friendly exports.
- **Technologies:** Python, Playwright, Ollama, pytest, Ruff, GitHub Actions

Savorfield Discord Bot

- **Role:** Game Developer
- **Description:** Built Savorfield, a text-based farming and cooking game on Discord where players manage farms, plant seeds, harvest crops, cook dishes, and interact with a dynamic market. Currently in alpha and actively gathering feedback to improve gameplay and future updates.
- **Technologies:** Node.js, MongoDB, Discord.js

Mobile Plant Care App

- **Role:** Unity Software Engineer
- **Description:** Developed interactive plant care mechanics, implemented UI/UX features, and designed original BGM and SFX for the app.
- **Technologies:** Unity, AWS, GitHub

3D Asset Creation

- **Role:** 3D Artist & Game Developer
- **Description:** Learning and creating 3D assets for game projects using Blender, focusing on low-poly models for VR environments.

VR Game Development

- **Role:** Unity Developer
- **Description:** Exploring VR mechanics and creating prototype projects to understand user interaction and immersive environments.

Education

Bachelor of Science in Computer Science

University of the Philippines - Davao City | June 2016

Certifications and Licenses

- PhilNITS FE Certified
- JLPT N3 Certified

Languages

- **Japanese:** Intermediate (N3)
- **Tagalog:** Native
- **English:** Proficient
